Student Forum Promotes a Greener and Cleaner School Environment:

Under the HOPE Project, Student Forum members have taken a leading role in promoting environmental awareness and cleanliness within their schools. To mark World Environment Day**,** students planted fruit and timber tree saplings on school premises and at their homes, encouraging environmental conservation beyond the school campus. They also demonstrated strong ownership by regularly watering the saplings, maintaining them, and protecting them from livestock by installing protective net fencing around the trees.

In addition to tree plantation, Student Forum members organized school cleaning campaigns, cleaning the school grounds, playgrounds, and the areas surrounding deep tube wells. Their initiative inspired other students to participate voluntarily, resulting in a cleaner, healthier, and more attractive learning environment.

These activities have strengthened students' environmental awareness, leadership, teamwork, and sense of social responsibility. The initiative demonstrates that, when provided with appropriate guidance and opportunities, young people can become effective agents of positive change by promoting environmental conservation and creating safe, clean, and sustainable school environments. It also serves as a good practice for fostering a culture of environmental stewardship and active citizenship within schools and surrounding communities.
